

Enabling AI-Powered Business Intelligence for Organizations

1. Executive Summary

InsightForge AI is a Pro Business Intelligence Assistant built using Python, LangChain, and Ollama (Gemma model). It enables structured, analytical, and role-based business insights for organizations.

2. Problem Statement

Organizations struggle to derive structured, actionable insights from raw data and unstructured business queries.

3. Solution Overview

InsightForge AI provides role-based intelligence modes including Data Analyst, Strategy Consultant, and KPI Expert to deliver structured insights.

4. System Architecture

User Input → Business Mode Detection → Conversation History Engine → Ollama (Gemma 3B) → Structured Output

5. Key Features

- Role-based Business Modes
- Context Memory using conversation history
- Local LLM using Ollama
- Structured analytical responses
- Professional business tone

6. Technologies Used

- Python 3.10
- LangChain
- Ollama
- Gemma 3B Model
- VS Code

7. Implementation Steps

1. Setup virtual environment
2. Install dependencies
3. Build conversation engine
4. Add Business Role Modes
5. Integrate Ollama model

8. Results & Output

The system successfully generates structured business responses based on selected professional role.

9. Conclusion

InsightForge AI demonstrates how local LLMs can power intelligent Business Intelligence systems.
